1. Setup

This first chunk loads all necessary packages, sources your custom functions, sets options, and loads all pre-calculated .rds objects. It also runs all the *deterministic* calculations (like calculating p-values, RMSE, and weight dataframes) from your 05_sdid_viz.R script. This makes all the objects (e.g., overlay_plot_raw, unit_weights_df, combined_att_data) available to all subsequent chunks in the document
